CITY OF AUSTIN PURCHASING OFFICE
SECTION 0500 – SCOPE OF WORK
RFP 1100 TVN3007 CATHODIC PROTECTION SYSTEM MAINTENANCE & TESTING
REVISION 1.2 06/19/2019

1.0 PURPOSE

The City of Austin, dba Austin Energy (AE), seeks proposals from qualified NACE-certified (National Association of Corrosion Engineers) firms experienced in the testing and maintenance of cathodic protection (CP) system to assist AE in preserving and improving the integrity of the Sand Hill Energy Center (SHEC) by implementing system maintenance recommended by a cathodic protection survey performed in 2017, by conducting annual surveys, and by maintaining the components of the CP system.

2.0 BACKGROUND

- 2.1 The most recent CP survey (Attachment 2), was conducted in late 2017 and indicated that protection coverage on portions of the system failed to meet NACE criteria. The rectifiers need to be adjusted until the system coverage becomes adequate. This correction process will require one or more cycles of changing the settings, waiting for the changes to reach equilibrium, then surveying the CP system to gauge effectiveness. It is not known how many cycles will be necessary to achieve sufficient protection.
- 2.2 SHEC's CP surveys in the past have been irregularly scheduled and have gone through multiple contractors. By putting the CP system under contract, the overhead of re-bidding the survey work can be eliminated, making it much easier to perform standard work on schedule.

3.0 CP SYSTEMS CLASSIFICATION

3.1 Unit 5 segment (combined cycle):

- 3.1.1 An impressed current CP system with two air-cooled rectifiers, Rectifiers #1 & #2, with 25 distributed mixed metal oxide anodes arranged on three circuits where test stations 21 through 44 are installed along the piping routes for monitoring.
- 3.1.2 An impressed current CP system with one air-cooled rectifier, Rectifier #3, and deep anode groundbed used to supplement the current of the CP system described in item 3.1.1. The negative cable is connected to the closed cooling water supply piping.
- 3.1.3 An impressed current CP system with one air-cooled rectifier, Rectifier #4, and deep anode groundbed used to protect the fuel gas piping main header into the plant. The negative cable is connected to the 20-inch gas piping.

3.2 Units 1-4 segment (gas turbine original installation):

- 3.2.1 An impressed current CP system with four air-cooled rectifiers, S14-CP-CPR-1 through -4, and an unspecified number and type of anodes. This segment of the CP system has only two test stations.

3.3 Units 6 and 7 segment (gas turbine expansion):

- 3.3.1 An impressed current CP system with one air-cooled rectifier, Rectifier #67, with 14 distributed mixed metal-oxide tubular anodes, where test stations 1 through 14 are installed along the piping routes for monitoring.
